

DEFENDING NETWORKS FROM COMPLEX DANGERS

Every day, networks are facing new online risks that threaten businesses with security breaches, slow performance, damaged productivity and expensive network clean-up exercises.

Designed to work alongside MailDefender and WebDefender Enterprise for exceptionally robust security, DeskDefender defends companies from the new breed of online threats.

Vialtus Solutions DeskDefender blends market-leading virus, spyware and intrusion prevention plus a management portal in one convenient package, the solution makes managing security and enhancing network defences easier than ever before.

SERVICE FEATURES

Control features

The DeskDefender Management Portal allows companies to configure their computers' security profile, add and remove users and view their security status. The portal also generates comprehensive reports while informing users of the latest emerging security threats.

Threat scanning

DeskDefender features scanning of all email traffic, web scanning of HTTP traffic before data arrives on web browsers, and spyware protection. It also prevents application hijacking by data stealing software. What's more, the integrated desktop firewall and intrusion protection blocks unauthorised access attempts, while repelling illicit system changes, browser hijacking and code injections from unknown threats in real-time.

Automatic service

Thanks to its multiple real-time scanning engines, DeskDefender stops viruses ever reaching your networks. Resilient servers automatically update the service's virus definition databases every day, protecting networks from the latest online dangers. DeskDefender's updates are the fastest and most frequently updated in the security industry.

Mobile security

DeskDefender's preset security profile is designed to provide maximum protection for laptops used outside the office. Profiles can be adjusted to match users' individual requirements when working in a secure environment.

Q Why should DeskDefender be any better than our current desktop Anti-Virus solutions?

Traditional Anti-Virus software only blocks basic spyware and adware, leaving thousands of new and complex spyware and adware risks undetected.

DeskDefender's firewall and intrusion prevention protects you from all the latest threats in real time, while giving you complete control of all your computers' security.

Q Is DeskDefender easy to install? We also have a variety of Anti-Virus software on our computers. Will that pose a problem?

With its clear on-screen instructions, installing, configuring and maintaining DeskDefender couldn't be easier.

Q What sets DeskDefender apart from the rest?

Alongside its robust, automatic and up-to-the-minute protection, the DeskDefender Management Portal is a compelling benefit for businesses.

Effortlessly simple to use, it allows you to control security settings, manage users, restrict applications and generate comprehensive security reports.

BUSINESS BENEFITS:

Effortless management

The DeskDefender Management Portal gives you complete control over your computers' security settings.

Real-time protection

The service continuously blocks threats targeting your networks through email, the Internet, hard disks, including USB sticks, and CD-ROMs.

Automatic updates

DeskDefender updates its virus definitions daily to protect your business from the latest complex risks.

Easy installation

DeskDefender immediately replaces existing Anti-Virus software, protecting businesses with pre-defined configurations.

Comprehensive defence

From workstations to mobile laptops, DeskDefender protects all your computers when connected to the Internet.

Grows with the business

DeskDefender is a flexible subscription service that adapts easily to your company's changing size and needs. The service's online portal also makes managing licenses effortlessly straightforward.

Technical support

DeskDefender's software automatically updates, in addition to this users can access our renowned technical support teams.
